Problem 2 - Array Modifier

Problem for exam preparation for the Programming Fundamentals Course @SoftUni. Submit your solutions in the SoftUni judge system at https://judge.softuni.org/Contests/Practice/Index/2474#1.

You are given an array with integers. Write a program to modify the elements after receiving the following commands:

- "swap {index1} {index2}" takes two elements and swap their places.
- "multiply {index1} {index2}" takes element at the 1st index and multiply it with the element at 2nd index. Save the product at the 1st index.
- "decrease" decreases all elements in the array with 1.

Input

On the **first input line**, you will be given **the initial array values** separated by a single space.

On the next lines you will receive commands until you receive the command "end". The commands are as follow:

- "swap {index1} {index2}"
- "multiply {index1} {index2}"
- "decrease"

Output

The output should be printed on the console and consist of elements of the modified array – separated by a comma and a single space ", ".

Constraints

- Elements of the array will be integer numbers in the range [-2³¹...2³¹]
- Count of the array elements will be in the range [2...100]
- Indexes will be always in the range of the array

Examples

Input Output Comments

```
23 -2 321 87 42 90 -123
                                  86, 7382, 2369942,
                                                              23 -2 321 87 42 90 -123 - initial values
                                  -124, 41, 89, -3
swap 1 3
                                                              swap 1(-2) and 3(87) ▼
swap 3 6
                                                              23 <mark>87</mark> 321 <mark>-2</mark> 42 90 -123
swap 1 0
                                                              swap 3(-2) and 6(-123) ▼
multiply 1 2
                                                              23 87 321 <mark>-123</mark> 42 90 <mark>-2</mark>
